

Real-time gunshot detection

A SHOTPOINT real-time gunshot detection and localization system provides first responders at the Las Vegas Fremont Street Experience Canopy with immediate notifications and actionable information expediting response times, vital for keeping 20 million annual visitors safe and secure.

Shotpoint Flexibility

SHOTPOINT is used indoors and outdoors with sensors placed up to 165 ft. apart, enabling full coverage of the four-block canopy. The system integrates with the customer's security camera and access control systems. Reports can be delivered to mobile devices, command centers, and third-party systems.

What users are saying about Shotpoint

"SHOTPOINT will tell us exactly where a shot came from and how many shooters there are. It's the best solution on the market and will supplement our human factor to keep our patrons safe. SHOTPOINT is absolutely needed in the world we live in today."

- Mark Reddon, Director of Security, Fremont Street Experience Canopy
